

Health Behavior Risk Screening App

Universal. Comprehensive. Designed to enhance communication.

Asking about sexual behavior can be challenging - so can discussing other important health-related issues like safety and trauma; anxiety and depression; and alcohol and drugs. Just Health's algorithms help navigate the tough questions and provide guidance for a richer conversation around health. Just Health aims to improve education, prevention, early diagnosis, and treatment.

More communication. Less stigma.

Just Health reveals risks that cut across many health domains, including safety, trauma, substance use, anxiety, eating, depression, and sex.

- User-friendly interface with skip logic
- Instant Individual Alert Reports
- Population-Level Aggregate Reports
- Focus on Intersectionality
- Clinical Guidance
- Counseling Messages
- EHR Interoperability
- **NEW: Sexual history-only version**
